

Color-coded touch screens aid in ease of training and speed of operations.

## For Colleges and Universities

### MICROS® e7 overview

MICROS e7 is specifically designed to meet the point-of-sale (POS) needs of smaller operations desiring a lower-cost terminal that is easy to install, manage, and maintain. As a MICROS-authorized system integrator, CBORD® has seamlessly integrated the e7 into its Odyssey PCS™ and OdysseyOne™ campus card product lines.

The e7 uses tried-and-true MICROS Workstation 4 hardware and peripherals. The system uses peer-to-peer communication with back office application support from a personal computer (PC). The e7 is capable of managing up to six POS devices in a single revenue center.

### e7 back-of-the-house application

The e7 back-of-the-house application can be installed on either the Odyssey PCS or OdysseyOne server, or on a separate desktop PC. System management and reporting tasks can be performed without disrupting front-of-house operation. Historical totals and journals are stored for easy information retrieval and analysis.

### Ease-of-use

Screen layouts can be customized to optimize functionality for every area of your operation. You can make changes to the menu item screens or add an employee to the system in minutes. The e7 is easy to learn and use, allowing a new cashier to be trained in less than an hour.

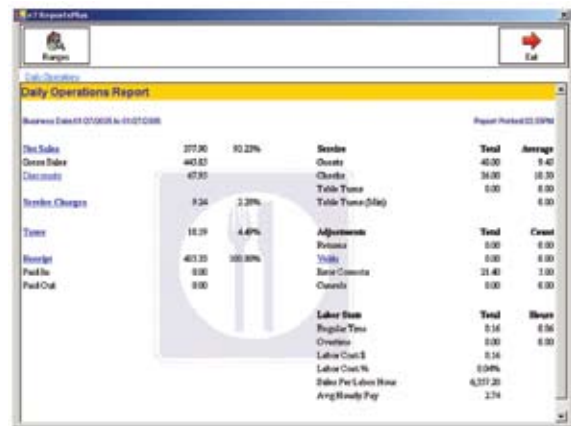

## MICROS® e7

### Reporting capabilities

The e7 system includes ReportsPlus, which provides instant drill-down information on the revenue center, as well as a dashboard which allows managers to view daily activities, totals, averages, net sales, and much more.

### Remote support

CBORD offers MICROS certified remote software support 24 hours a day, seven days a week. This means that regardless of when

ReportsPlus is an interactive tool for viewing and analyzing report totals from the POS terminal.

you have a question, you can call the CBORD support team and receive immediate assistance
